

## **E. GILBERT, AN INSANE PERSON. M. E. GILBERT, GUARDIAN. REPEATING MECHANISM FOR PHONOGRAPHS.**

Play It Again, Elam: In Patent No. 738,316, Gilbert removed the solid rear carriage rod on an Edison Home Phonograph and inserted a hollow steel tube with an internal reverse thread. This shaft was fitted with a  $\frac{3}{4}$ " diameter channeled pulley wheel (at the left) which took its power from the main feed-screw pulley via an additional smaller drive-wheel. An eccentric spinning collar at the right of the feed-screw grooves activated the return mechanism. The model above lacks the levered engaging arm and part of the lift holder. Gilbert received 5 other patents from 1903-10: 738,317, 761,371, 766,341, 911,491, and 969,946. The last two are marked with the words "An Insane Person."

## **ELAM GILBERT: AN INSANE PERSON** **THE MYSTERY OF AN UNKNOWN PHONOGRAPH INVENTOR**

Robert Feinstein

THE ANTIQUE PHONOGRAPH MONTHLY® is published in four issues per volume. It is mailed first-class to subscribers in the USA and Canada, and via surface or airmail to overseas. APM welcomes articles and news of interest to its readers, and offers its services to appropriate advertisers at reasonable rates. Please notify us promptly of any change in address to ensure receiving your copies on time.

Please send all correspondence, subscription orders, and advertising to:

Back issues, when available, will be supplied by the *volume* only. Thank you!

DEAR APM:

Question: I have heard that Edison black-wax molded cylinders (2-min. style) first used the white end-titles in August 1904. Who was responsible for this?

L.N., Buffalo, NY

Answer: Albert F. Wurth, an associate of Edison's, filed for the patent to include this useful information on pre-existing cylinder molds on May 24, 1904 (Pat. No. 773,617). This and many other fascinating details will soon be available in APM's forthcoming *Phonograph Patent Treasury*.

Question: I collect old phonograph and record ads from the turn of the century and wondered what it cost to run such an ad originally.

A.P., Lima, OH

Answer: We have located the following figures: A full page ad in *Cosmopolitan Magazine* in 1897 cost \$448.; in *Munsey's*, \$400.; in *McClure's*, \$300.; in *Century*, \$250.; in *Harper's*, \$250.; and *Scribner's*, \$200, and APM, \$65. That's when a dollar was a dollar! □

Pat. 738,316 also shows the return lever (27), eccentric collar (29) and the reverse thread (9).

# The Mystery of an Unknown Phonograph Inventor

Back in 1974, when the editor of APM began compiling the first complete catalog of American phonograph and record patents, one immediately caught his eye. After days of looking at thousands of strange and unusual designs, he noticed a patent from 1909 (for a cylinder repeating attachment) clearly identified by the Federal Government as being issued to one Elam Gilbert - "An Insane Person." There were many other patents — a talking crow and a square record, to mention just two — which the Patent Office granted without so much as a hint about the mental status of the inventor (although we had our suspicions!). Why then was Gilbert singled out in this way? Continued research over the years revealed that no other phonograph inventor ever received this dubious distinction.

Other matters intervened, and the patent sat in the APM Archives. But then around 1980, an odd repeating device turned up on an ordinary Edison Home Phonograph and APM had a chance to purchase it. Professionally engraved in faint letters on the feed-nut arm were the words: "Gilbert Repeater, Pat. Sep. 8, [19]03". A check of the patent files proved that this was indeed an earlier, manufactured, version created by the very same Elam Gilbert, of Portland, Oregon! Other incomplete models of the invention were rumored to exist in several collections, but none had additional documentation.

A thorough search showed that Gilbert had filed for and was granted six American patents between 1902 and 1910 (the first four of which made no mention of his insanity). I also subsequently learned that Gilbert had tried to interest the Edison Company in buying and manufacturing his last patent, but to no avail. Who then was Elam Gilbert and why did he become mentally disturbed? Did disappointment over failure to win fame and fortune as an inventor trigger his illness? Or did his emotional problems have other causes? I also wondered what the patents might illustrate about the way phonograph inventors worked and developed their ideas around the turn of the century.

The clues were sparse on the patents themselves. One Mattie E. Gilbert was listed as Elam's guardian on #911,491 and 969,946 (1909 & 1910). Was Mattie the inventor's wife, parent, brother or some other relative? This relationship has not yet been determined.

Hoping to solve some of these mysteries, I studied every Gilbert genealogy in the New York Public Library's huge Genealogical and Local History Division. Neither person was found, although one source listed an Elam Gilbert - obviously *not* the inventor - as having lived in colonial New England. Five historical societies in Gilbert's home city of Portland were contacted, but they were unable to pro-

vide any additional information. The State Archives in Salem also came up empty-handed. A modern Elmer Gilbert phoned at random in Portland produced no leads. No one there had ever heard of him. An article in the *Oregon Historical Quarterly* (Dec. 1945), on the history of insanity in Oregon, simply stated that according to the government statutes: "The words 'insane person' [were] intended to include every idiot, person not of sound mind, lunatic, or distracted person." A 12-member jury would decide on the validity of the insanity charge, and the probate court would assign a guardian.

Finally, in 1981, I asked Leah Burt, the always-helpful Assistant Archivist at the Edison National Historic Site, to search her files. There a few clues emerged concerning Gilbert's attempts to interest Edison in a cylinder record ejector he had devised in 1902. The long time between his application on Dec. 18 and the grant date of Sept. 13, 1910 resulted from numerous and unsuccessful patent interferences filed by other inventors, such as Julius Wellner, Geo. H. Underhill, David S. Williams (aligned with J. A. Vincent), and Joseph H. Williams (aligned with Underhill).

The Edison Site was able to supply me with photocopies of six interesting letters written during the summer of 1905 when Gilbert's attorneys, L. S. Bacon and J. H. Milans of Washington, D.C., tried to sell the record ejector, with patent pending, to the National Phonograph Company. Unfortunately, I found no law-firm of this name in current U.S. telephone and legal directories.

The letters showed that on July 5, 1905, Gilbert's lawyers wrote to Frank L. Dyer, Edison's personal attorney and one of his future biographers. They discussed the ejector, disparaged the interference lawsuits, and offered it for sale.

Bacon & Milans received Dyer's reply, dated July 21st, which was mildly encouraging: "I cannot tell very definitely from the claim whether the apparatus would be one in which we would likely to be interested, but if your client would be willing to have you send me copy of the specification and drawing, I will be very glad to look into it and submit the matter to the National Phonograph Company."

One letter from Bacon & Milans to Dyer might have been lost over the years, because a note dated August 12th referred to some correspondence sent to Dyer on July 22nd. Among other things, the note said: "Messrs. Emery, Booth & Powell represent Underhill and they have made Mr. Gilbert an offer for the invention which however, is not altogether satisfactory." Dyer received the specifications and drawing and on August 25th wrote to William E. Gilmore, President of the National Phonograph Company. Dyer was apparently inter-

Aug. 31, 1905.

Frank L. Dyer, Esq.,  
Laboratory.

Dear Sir:

I have your favor of the 25th. Mr. Aiken has looked over the specifications and drawing submitted by Mr. Elam Gilbert on the record ejector for phonographs, and from his report to me I do not see that this would be of any practical use to us whatever commercially. Under the circumstances, we do not care to purchase same and the papers are returned herewith.

Yours very truly,

*W. E. Gilmore*

President.

WEG/IWW

Was Gilbert dejected when Gilmore rejected his record ejector?

(Courtesy ENHS)

ested, for he remarked: "The idea appears to be substantially novel, and the patent when granted, would, I believe, be satisfactory, provided of course the invention possesses merit.... The Gilbert patent was filed about a year ahead of his nearest competitor, so that it is probable that the interferences will be decided in his favor.... They tell me [July 19th] that the invention can be purchased for from three to four thousand dollars, which of course means that the inventor would take much less, if offered to him...."

However, it was not to be. Gilmore promptly replied to Dyer - on August 31st - that: "Mr. [Edward L.] Aiken has looked over the specifications and drawing submitted by Mr. Elam Gilbert on the record ejector for phonographs, and from his report to me I do not see that this would be of any practical use to us whatever commercially. Under the circumstances, we do not care to purchase same and the papers are returned herewith." Aiken was an important Edison supervisor and himself had received numerous patents, including one for the Type D repeater, which was a triumph of simplicity compared to Gilbert's double-pulley arrangement. Dyer then wrote to Bacon & Milans on September 1, 1905, politely declining their offer.

Surely Gilbert must have been disappointed by this rejection, and we do not know if *this* mechanism was ever produced. Edison's company continued to be interested in record ejec-

tors, — especially for business phonographs — but developed their own designs.

A closer reading of Gilbert's fifth patent (911,491 - for an improved repeater) showed that it was assigned to an Albert A. Klingman of New York City, but what he may have done with it is not known. There were at least *two* Albert Klingmans in New York at the time, one a printer and the other a pharmacist, but no descendants of either man could be located.

I consulted Allen Koenigsberg's *Phonograph Patent Treasury* and found that from 1877 to 1912 only ten patents were issued to Oregon residents - *six* of them to Gilbert. Whatever the personal difficulties that led to his being adjudged insane, Gilbert managed to obtain more phonograph patents than the rest of the state combined!

We had hoped to have a photograph of Gilbert for this article, but Culver Pictures and the Bettmann Archive failed to locate any, and his image did not appear in the reference books or indexes that were consulted.

Hopefully, this account will lead to more information about the life and work of this unusual man, the first (and only?) inventor ever acknowledged "insane" by the U.S. Patent Office. But thus far material on Gilbert's life has been as hard to locate as one of his repeating attachments. Perhaps some collector will come across another of his devices, and he will receive the recognition he deserves. □

# THE PHONOMETER

AN ABSOLUTE NECESSITY  
TO PERFECT REPRODUCTION FOR TALKING MACHINES

The Only Accurate Speed Meter Made

Adapted for Use on all Disc Machines

## Why the PHONOMETER is a Necessity!

**You have a Talking Machine.** You have purchased good Records, and yet the reproduction is not satisfactory. Caruso, Melba and other of the well-known artists' voices do not reproduce like the original; the individuality, life-like realism and peculiar quality of the voice does not come forth!

The Violin, Violoncello and other solo instruments do not reproduce naturally. Why?

**BECAUSE** your machine is not running at the correct speed. *And are you aware* that not one in a thousand Talking Machines run at the speed they indicate on their dial, or if so, remain so?

## The PHONOMETER Guarantees Correct Speed, Hence Correct Reproduction

It is the only speed meter made on the principle of centrifugal force and therefore must be accurate. One trial will convince.

*Directions for use.*—Place the Phonometer on turn-table of your machine so that the hole in its base drops over the top of shaft in centre, thus securing it. Turn brake lever as usual and start machine. Turn the regulating screw as before, and the pointer on the **Phonometer** will instantly indicate the number of revolutions per minute that the machine is running.

Correct speed is generally developed at 76 revolutions per minute.

*What if they called them 76's instead of 78's? This simple but clever speed indicator was placed over the spindle and gave a quick centrifugal read-out. A similar model (called the Rotometer) was manufactured by the Lakeside Supply Co. of Chicago, ca. 1910. Correct speed was given at 76 rpm.*

## FROM THE GOLDEN AGE . . . *Django was an exception!*

Joe Klee

The writer and the drummer were having an argument. An argument loud enough that everybody in the club could bear witness to it. The writer had mentioned the name of a white jazz musician in the same breath with that of a black jazz musician. "No white man can play jazz," maintained the drummer. This must have been an embarrassment to the pianist who had hired the drummer for the gig . . . who happened to be white. The writer, looking for an out, mentioned the name of Django Reinhardt. "Django," the drummer replied, "was an exception." That ended the argument. Django certainly was, and is, an exception.

Jean Baptiste Reinhardt was born January 23, 1910 in Belgium. The acknowledged first jazz records by the Original Dixieland Jass Band were more than half a decade away. The son of a gypsy fiddler, Django learned to play violin as well as guitar and banjo as a child in Paris. He is reputed to have made records as early as 1926 with a singer named Chabel or Chaumel. His earliest recordings that have been found and re-issued (after his left-hand was burned in a fire) are in the questionable company of accordionist Jean Vaissade. One of these "Griserie" is included on the first of seven LPs issued by the DRG Swing label under the general heading of *Djangologie/USA*. The contents of six of these seven LPs has similarly been pressed onto CD by the same company. By rough calculation, that comes out to 96 cuts on the CD issue plus an added 19 on that 7th LP. That's an awful lot of Django. One thing I've noticed in certain jazz festival listening (like WKCR's recent week-long Sidney Bechet festival) is that after the first couple of hours some of that 'enough-already' feeling is beginning to creep into the emotions. Extended listening sessions such as these have soured me on such diverse performers as Billie Holiday and Wanda Landowska. When faced with this much of one performer (e.g. the Norman Granz/Art Tatum compilation on Pablo), I've found it good practice to take it one or two sides at a time interspersed with a lot of other types of music. There *are* exceptions... Louis Armstrong, Charlie Parker, and Django (yes, once again Django is an exception). It may have something to do with the various settings in which one finds Django. He works with accordion players, slide whistle players, singers (some good ones including Jean Sablon), Theatre Orchestras, Swing Bands, visiting firemen from the USA (including Benny Carter, Coleman Hawkins, Barney Bigard, Rex Stewart and Eddie "The Dark Angel of the Violin" South), as well as European Jazz Stars like Alex Combelle and Andre Ekyan. But then the variety is not all that central to the question since the great majority of his recordings are with various incarnations of the Quintet of The Hot

Club of France. The Quintet formula was fairly simple and rather inflexible. Django was both soloist and rhythm player. The lead or melody role was shared by Django and one other player... at first, violinist Stephane Grappelli whose name seems to have more spellings than any jazz musician I can think of... later, clarinetist Hubert Rostang. Neither of these players would be on my list of all stars for the desert island, but they served their purpose (and Django) well. Both provided another texture to the lead melodic instrument and if Stephane didn't swing as hard as Venuti... well, nobody else did either. Sometime I think Django relished being aided by cohorts who didn't really challenge his authority, although when faced with the task of collaborating with a Coleman Hawkins, Benny Carter, Bill Coleman or Rex Stewart, he was up to it. The dates on which he and Grappelli are joined by Eddie South show Grappelli less able to deal with the challenge than Django... but then to paraphrase what Godowsky said to Elman at Jascha Heifetz' American debut, it wasn't as warm for guitarists as it was for fiddlers.

The difference between the LP set (DRG SWING SW 8420-26[7]) and the CDs (DRG SWINGCDSW8421/22/23andCDSW8424/25/26) is more than the improved CD sound or the convenience of juggling four compact discs as opposed to half a dozen LPs. Liner notes on the CD issue are extremely sparse... the seven LP jackets give space for much more information, data and general flavor. There are also some photos on the LP jackets which cannot be fitted into the limited liner note space of the six-page booklet accompanying each double CD set. Also the numbering of the CDs can be a bit misleading. Although the Jewel Box lists three numbers (such as 8421/2/3), there are only two discs in each box. These numbers are the numbers of the corresponding LPs in the LP set... three LPs to each double CD set. Now that sounds like a convincing bargain price-wise and space-wise, BUT that elusive LP SW 8420 has not, to the best of my knowledge, been made available separately so the CD buyer will miss the rarest Django in this collection, including recordings with accordionists Jean Vaissade, Victor Marceau (which includes Erardy on slide whistle) and Louis Vola who later switched to bass and became part of the Hot Club Quintet. It also includes recordings with the Orchestra of the Theatre Daunou and Patrick and his Jazz Orchestra. Among the vocalists Django accompanies on this first LP is Jean Sablon, sometimes referred to as the French Bing Crosby, and like Bing, he used some of the best jazzmen on his records... making Django the French Eddie Lang. Well, not really... but then let's just say that Django did for Sablon what Lang did for Bing and we

won't be too far off base. Jean Sablon's sister, Germaine, also included Django in her backup band and while Hildegard is missing (she and Django were both on a Patrick's Orchestra date in 1935), her theme song "Darling Je Vous Aime Beaucoup" is in this collection recorded Jean Tranchant with Stephane and Django. There's also a version sung in French by Leon Monosson of Cole Porter's "Night and Day" which includes trumpeter Arthur Briggs as well as Django in the band. Four of the tunes on SW 8420 were unissued at the time they were recorded and I believe are being issued for the first time in the U.S. although they may previously have come out on a French-issued LP series also called *Djangologie* - some years ago. Once the first LP is over and done with, everything that's on LP also appears on CD in life-like stunning digitally remastered sound like you've never heard before except in your imagination.

WARNING... there is a version of "Alabama Bound" on both LP SW 8423 and CD CDSW 8422/23 that is missing four measures of the second chorus. This excision is on both LP and CD, although I don't know if the earlier French Pathe issue contains the full version or not. Just the same, if something got botched up, better it should be "Alabama Bound" than "Tears" or "Nuages."

I don't know about the rest of you. I imagine there *are* some Django fans who listen to him as regularly as I listen to Louis or Benny but, for me at least, coming back to these records after some extended period of time is something akin to what someone lost on the desert must feel when suddenly coming back to civilization and tasting water again for the first time. I'd forgotten how good these records were. To hear Django's solo on "In My Solitude" again after that long is reliving the whole experience of initial discovery. Unfortunately, my initial discovery was not included here, I suspect, because of contractual reasons. As a teenager, I had befriended guitarist Les Paul who was on staff at WBBM, the Chicago CBS affiliate. He told me about Django (who died in 1953). My typical answer was to say "Never heard of him. Who's he?" Les told me about the Quintet of the Hot Club of France and an album of four ten-inch red label Decca 78s. I bought the album. The first record was "Avalon" by the Quintet with added brass section and a bass introduction that I still hear in my dreams, but only on a good night. Since the majority of these recordings are either from the French Swing label or Pathe Marconi or the French equivalent of the British HMV label or some other member of the EMI conglomerate, I'd presume that the French and English Deccas and the Ultraphone material was not available for licensing to DRG. I hope that eventually all of Django Reinhardt's recordings will be re-issued on both LP and CD; till then I'm more than willing to accept this generous offering as a stop-gap measure.

Listing only the barest minimum of highlights... there is a most exciting jazz improvisation on J.S. Bach's "Double Concerto in D minor for 2 violins and orchestra". Stephane Grappelli and Eddie South are the two violin soloists. Django is the orchestra. There are unaccompanied Django solo items such as the near-flamenco "Sketches of Spain"... Django used the title long before Miles Davis. There are sessions with Coleman Hawkins and Benny Carter and Rex Stewart and Barney Bigard and Bill Coleman and Dickie Wells that are must listening for any jazz fan. There is "Bolero de Django"... Django's not Ravel's - though they certainly are related.

There are a couple of salient points to be made about Django Reinhardt before bringing this survey to an end. Django had his influences and he had an influence on others. To be sure he must have heard Eddie Lang. Lang, an exceptionally gifted and generously recorded guitarist of the 20's, would have to be considered an influence. Another influence no doubt was Louis Armstrong whose record of "Dallas Blues" is rumored to be the first jazz recording that Django heard. Yet even these obvious influences came out differently under Django's fingers. One reason is the fire which damaged two fingers of his left (fretting) hand, thus forcing him to totally restructure his fingering system on the guitar. So whatever Django Reinhardt heard or learned from Lang, Armstrong or anyone else for that matter, it came out typically Django. Another reason was his instrument itself. Specially made for Django, it had a totally distinctive look and sound. Unlike today's electrically amplified guitars which tend to make everyone sound alike, at least tonally, one note from Django on this instrument and the signature was there. You knew it was Django. Years later, when he switched to electric guitar, Django sounded more like his prime American disciple, Les Paul, than he did like Django.

A criticism must be made and it must be laid mainly to Django since it was he who laid down the chord patterns for all guitarists in the Quintet. There are some strange approximations of chord changes on quite a few of these pieces... most notably the "Star Dust" on which it is to Coleman Hawkins' everlasting credit that he is able to create a masterpiece despite Django's and Stephane's misconception of the chord changes of Hoagy Carmichael's classic. Even more mysterious is the chord sequence that Django dreams up for the "Ol' Miss" strain on Dickie Wells' recording of "Bugle Call Rag." Once you get used to these strange chord changes they become part and parcel of the charm that makes these records what they are.

The LP package includes a forty-six page Django Reinhardt discography. While the discography does not come with the CD package, DRG has made it available on request to CD purchasers for minimal cost to cover mailing and handling.

Django Reinhardt was 36 years old before he ever set foot on the shores of North America. He came here to perform in concert with Duke Ellington and his orchestra. He came without a guitar and had to play on a borrowed instrument for the concert tour. While his career had another 17 years to go before his untimely death, he came with an impressive portfolio of recorded success, both with the Quintet and with visiting American players who, by this time, even included such new faces as Mel Powell and Peanuts Hucko. He was a legend before he got here. His acceptance by Duke Ellington had made it clear that this foreign-born jazz musician was doing far more than carrying coals to Newcastle. Anyone who heard these concerts or the bootleg recordings that someone made of the concert in Chicago can attest that Django, even with the Ellington band, was among his peers.

Just like the drummer told me, oops, I mean the writer, "Django was an exception." And what an exception he was. □

By the way, I notice that in 'Dear APM' last issue, Mildred Bailey is given modern credit for the term 'Rock 'n Roll'. I believe I can push back the date four years with the Boswell Sisters' (Connie, Martha, Helvetia) 1934 78-rpm recording (Oct. 4) of "Rock and Roll", mx. no. LA-221-A, released on Brunswick 7302, Columbia 36523, and Parlophone R-2631. Who is this E.P. of Nashville anyway? □

## BOOK REVIEW

### *Automatic Pleasures/Quaker Catalog/Berlin*

Collectors should be aware of three new publications covering different aspects of our hobby. The first is a handsome, hard-bound edition entitled *Automatic Pleasures: The History of the Coin Machine* by Nic Costa. This elegant book, with over 260 black and white and color photos, and 224 pages, covers the known field of coin-operated machines of all kinds. The author, to his credit, has done much original research and has advanced our knowledge of these charming mechanical wonders. Eighteen chapters cover the first devices in the mid-nineteenth century (in England and the U.S.), and follows their development through the golden age of the late-19th and early 20th centuries. Chapter headings include *Gambling Machines, Competitive Machines, Electric Shock Devices, Fortune Tellers, Strength Testers, Vending Machines and Viewers*, etc. Of course, the one we immediately turned to was *Music and Sound Machines*!

Costa has uncovered some new details on Charles Adams Randall, who produced a coin-operated cylinder phonograph in 1888, called the Automatic Pariophone. Costa believes it was actually manufactured, but the original patent specifies electromagnetic re-

production, and it is hard to believe that the technology was sophisticated enough for electric playback at that date. At any rate, none of Randall's machines have been located. Other manufacturers mentioned (and pictured) are Mills Novelty Co., Caille Brothers, Edison, and Gabel's. A typographical error on p. 160 identifies an Edison/Keller coin-op as an 'Edwards', but the date of 1891 is accurate.

As one browses through this book, it is very easy to become addicted. All the machines exhibit that kind of mechanical ingenuity that phonograph collectors know and love - and the social and cultural impact of the devices is equally fascinating. Most of the illustrations are from real machines in modern collections, but there are also patent drawings, advertisements, catalog sheets, and cartoons. If you think that modern video games are clever, wait till you see what the golden age of mechanical invention did with the human need to be entertained and amused! Available at your local bookstore or directly from APM for \$25.95.

If you had an "antique" phonograph in the mid-1920's and needed a part, what did you do? The answer is simple - you sent for the "Honest Quaker" Parts Catalog put out by Everybody's Talking Machine Co. of Philadelphia, Pa., which advertised itself as the world's largest supply house. It is fairly hard to locate the original, so the 1928 edition (8½" x 10") has now been reissued with a plastic comb - the company was founded in 1914. There are sections on every imaginable part, from Pathe, Edison, Columbia, Starr, Mandel, Aeolian, Thorens, etc., from gears and motors to cranks and tools. All are illustrated in sharp B&W, and described in detail. If only we could order now - but the book, priced at \$20. does make an excellent reference for communicating with other collectors. It is available from Talbot & Brown, 193 Roselawn N.E., Warren, OH 44483.

Ian Whitcomb has long been fascinated by Ragtime personalities and music, and it shows in his new book *Irving Berlin and Ragtime America*. It is an idiosyncratic overview, full of personal observations, and the writing is vigorous. Whitcomb actually covers more than his title allows, going into minstrel and coon songs, tin-pan alley, and the varieties of popular music in 222 pages. You'll have to read the book to figure out how Rasputin got in it! It is available for \$15. (soft), directly from Ian Whitcomb (who also produces ragtime music on record), at P. O. Box 451, Altadena, CA 91001. My only complaint is that the excellent research is not footnoted and there is no bibliography. However, the book is fully indexed. □

## NOTICE
